DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Hartman et al, Everaerts et al, Makhoul et al, Gehlsen et al or EP 0717091 A2, of record.

3. Applicants urge that Hartman et al does not utilize the expandable microspheres contained in the matrix resin. Note col. 4 lines 5-20 where the expandable beads are foamed within the matrix. Note also that the instant claims do not preclude the presence of other voids other than from the microspheres being present in patentees composition. Note also that there is no evidence in the record to show that the reference does not produce the same results as claimed when the microspheres are expanded.

4. Applicants' arguments with regard to Everaerts et al are answered in col. 10 specifically lines 29-34 and more particularly in lines 37-40.

5. Applicants argue that Makhoul et al does not teach that the expansion caused by the thermoexpansion of their microspheres causes adhesion deactivation of the bonded surfaces on which the resin composition is on. However note there is no factual comparative evidence to show that merely the fact patentees may be silent in this regard they do not inherently produce the claimed results.

6. The presence of voids, other than those called for in the instant claims, in the Gehlsen patent, nevertheless still reads on the instant claims.

7. Again it is submitted that there is no comparative evidence to show that there is no adhesion deactivation in the process of the EP 0717091 when heating to foam the expandable microspheres in the process of the reference.

8. The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a

background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
